System is hanging with CPU errors in SYSLOG

Published 03/09/2001

Symptom(s):

System is hanging with CPU errors in SYSLOG
SYSLOG Error: "unix: WARNING: CPU 0 hasn't seen a scheduler clock interrupt in 14170 seconds"
SYSLOG Error: "unix: Probably caused by splhi or spl7 delaying the interrupt"
SYSLOG Error: "unix: WARNING:
(MAINT-NEEDED):/hw/module/2/slot/MotherBoard/node/memory/dimm_bank/0"

Fact(s):

SGI Origin 200
IRIX 6.5.6m

SGI Solution:

Replacing memory modules in Dimm 0 resolved the problem
